Isabel,

From the PRAP:

Pursuant to an Interim Action ROD issued by NYSDEC in March 1996 and an Amended Order on Consent executed on May 12, 1997, GE constructed the groundwater extraction and treatment system. Operation of that system commenced on May 15, 2001. The system consists of 12 extraction wells in and near the source areas and one off-site extraction well.

To date the system has treated over 60 million gallons of groundwater and removed over 100,000 pounds of VOCs from the site. The system serves to contain the site contaminants in the shallow bedrock and prevent off-site migration. However, concentrations of site contaminants in the extraction area still remain high.

It's brief. Let me know if you need more.

Kevin
